1. Tjejträffen 2026

2. Tyresö JGP 2026

3. **Trojanska Hästen JGP 2026 Vår**
4. **SIS Chess JGP 2026**
5. **Wasa JGP 2026**
6. **SS 4 Springare JGP 2026**
7. **Junior-DM i Snabbschack 2026**

How it works

Sorting rules

1. Total points: highest first (see next section for details of points)
2. Klass: ascending order

Tie-breakers:

1. Participation recency: This puts players who participated in recent tournaments first
2. Performance recency: This ranks by actual points earned in recent tournaments
3. Age tie-breaker: older players first
4. Total tournaments played: a player with fewer tournaments placed first

Sort by total points, then by class, then prioritize players who played recently AND performed well recently, with age and total games as final tie-breakers.

Points assignment

- For each tournament, filter to girls, group by Klass, and sort by place, scaled points, quality points (kv.p), and birth year
  - points are scaled by number of rounds since juniors and seniors may play different number of rounds
  - place sorts by individual performance between each pair of players
- In normal scoring, assign 11 STD points to the median
- In normal scoring with more than one player, assign 25 to first player and 5 to last player
- In normal scoring with one player, assign 5 points
- Scale and assign the rest of the points within this range (scaling formula is explained below)
- In non-JDM tournaments, E, F, and Z players are given 5 baseline points, and top 3 players get 8, 7, and 6 points

Points scaling

- Within each sorted Klass we calculate percentile placement (q)
  - How much better is this player compared to those who scored less?
- Formula: `q(i) = ( N - i ) / ( N - 1 )`, where `N` is total number of players. When `N = 1`, the code uses `q = 0`.
  - For groups with more than one player, this gives `1, 0.5, 0` as the top, middle, and bottom percentile scores when those positions exist.
- 5 to 11 is 6 places, whereas 11 to 25 is 14 places
  - So, we scale these two “piece-wise” and round them to the nearest integer
  - top half get: `11 + 28*(q-0.5)` (i.e. 25 through 11)
  - players below median get `5 + 12*q` (i.e. 10 through 5)
